

How to check if my PDF is correct?

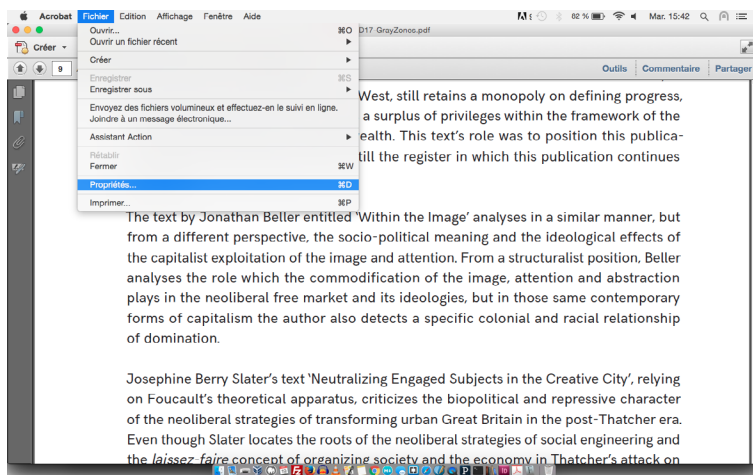

It is possible to check if the PDF is correctly exported in order to avoid bugs when printing, by verifying its parameters with Adobe Acrobat Reader.

1. Open your PDF with Adobe Acrobat Reader

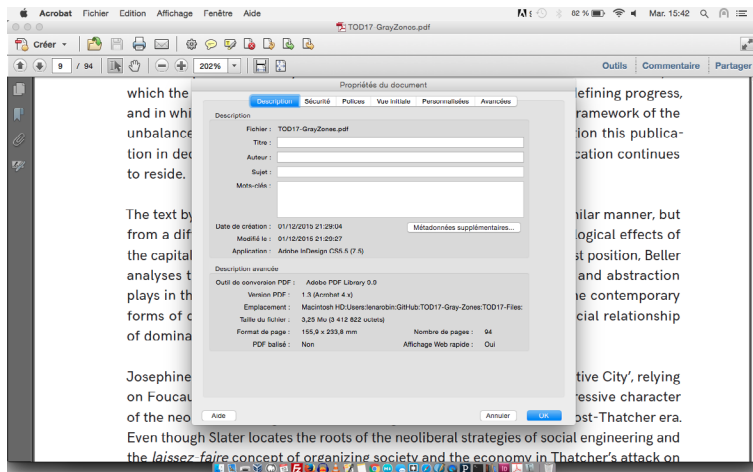

2. Verify the PDF version

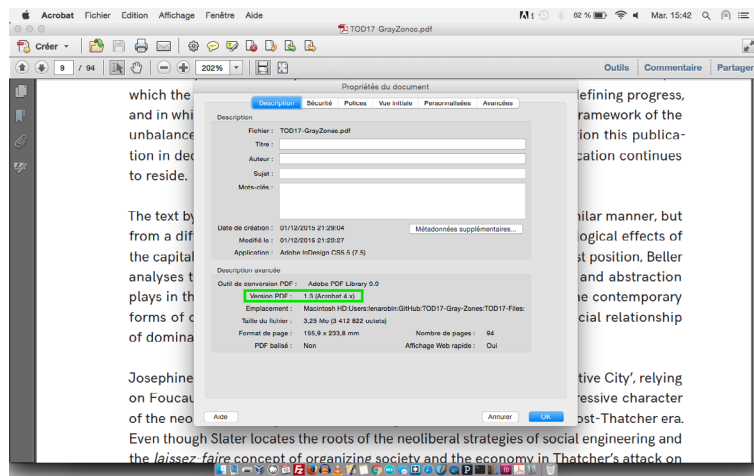

- In the Acrobat menu go to: **File > Properties...**

- Go to the **Description** panel.

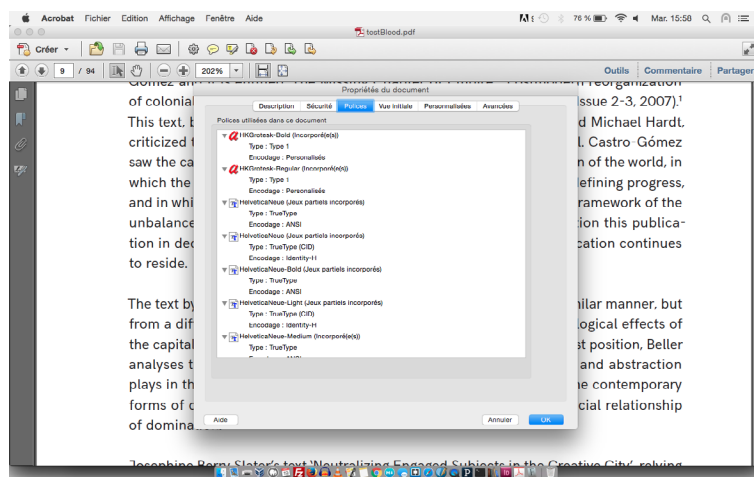

- The document is correct only if the PDF version is:
1.3 (Acrobat 4.x)

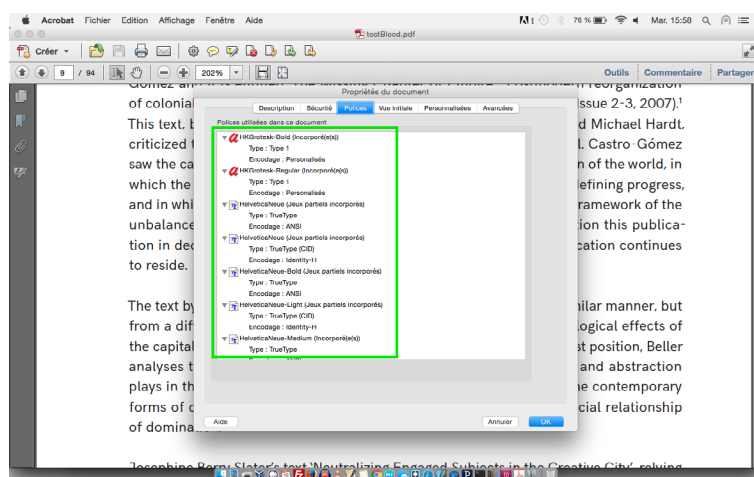

2. Verify the fonts

- Go to the **Fonts** panel.

- The document is correct only if all the fonts used in the layout appear in the list.

⚠ If you use different styles of a same font (regular, bold, italic...), there should be one file displaying for each style.

- ▼ **HKGrotesk-Bold** (Incorporé(e)s)
Type : Type 1
Encodage : Personnalisés
- ▼ **HKGrotesk-Regular** (Incorporé(e)s)
Type : Type 1
Encodage : Personnalisés
